Course Description:

This workshop provides comprehensive, hands-on training in building and analyzing financial models from scratch. Participants will acquire practical skills and knowledge essential for effective financial analysis and strategic decision-making.

Target Audience:

- Finance professionals with an intermediate to solid understanding of finance and accounting concepts and basic Excel proficiency.
- Suitable for investors, credit analysts, investment analysts, accountants, and finance experts involved in building, refining, or troubleshooting complex models, or those seeking solutions to advanced modeling

Course Objectives:

By the end of the course, participants will be able to:

- Develop comprehensive, integrated financial statements based on financial accounting principles.
- Apply essential Excel functions for financial modeling and performance analysis.
- Implement scenario-building and sensitivity analysis to enhance model accuracy.

Course Outline:

Introduction to Financial Modeling

- Overview and applications of financial models
- Best practices in model planning and structure
- Key elements of effective financial models
- Design, formatting, and organizational techniques
- Structural integrity and formula validation

Essential Excel Tools & Formulas
